Designing for Older Adults

Background and Objective of the CREATE-Workshop

Digitalization and technology are perceived as possible options to meet challenges associated with aging. Although new products come increasingly into the market, a breakthrough and wide spread dissemination is missing due to many factor such as stigmatizing design or usability issues.

The Center for Research and Education on Aging and Technology Enhancement (CREATE) is a nearly 20 year old collaborative Center across prominent American Universities dedicated to ensure that older adults can successfully use technology and realize the potential benefits of technology. Therefore, the major objective of this workshop is to learn from the CREATE experience and exchange and discuss possibilities for German research and development in the technology and aging field.

Goals of the workshop are to provide knowledge and expertise:

- on the aging process including sensory, motor, and cognitive functioning and their implications for technological development;
- on issues relevant to the design and implementation of technology in real world settings of aging;
- for the development of an academic career of early stage researchers in aging and technology.
